

ASSESS THE PHENOTYPE AND PURITY OF CELLS

With Reliable Antibodies for Your Research

Antibodies are an essential component of your cell-based research tool kit, enabling you to identify and locate specific cell markers and obtain optimal staining profiles. Accurate and consistent results for your downstream analysis, including phenotyping and purity assessments, require high-quality primary and secondary antibodies that are compatible with your cell isolation and cell culture reagents.

Be confident in your experimental results, save valuable research time and ensure experimental reproducibility by choosing antibodies from STEMCELL Technologies. STEMCELL's antibodies are used in many different applications, including flow cytometry, western blot, immunocytochemistry, immunofluorescence microscopy, immunohistochemistry, and immunoprecipitation.*

For your convenience and to suit your research needs, antibodies are available in different size options as well as conjugates. For more information and details on pricing visit www.stemcell.com/Antibodies.

*Please consult each product's Product Information Sheet (PIS) for a complete list of verified applications.

Why Use Our Antibodies?

LARGE SELECTION. Choose from a range of high-quality primary and secondary antibodies and isotype controls.

RELIABLE. Be confident in your downstream analysis by using antibodies verified to work with our cell isolation and cell culture products in select applications.*

SAVE TIME. Skip optimizing your cell analysis by starting with verified antibodies.

SUPPORT. Get help when you need it from our dedicated team of research scientists and product and scientific support staff.
