Product Description

1-Oleoyl Lysophosphatidic Acid is a species of lysophosphatidic acid (LPA) containing oleic acid at the ***sn***-1 position. LPA binds to four different G-protein-linked receptors (Chun et al.) to mediate a variety of biological responses including cell proliferation, smooth muscle contraction, platelet aggregation, neurite retraction, and cell motility (Moolenaar). 1-Oleoyl Lysophosphatidic Acid is the most potent of the LPA analogs for calcium mobilization in A431 cells (Jalink et al.) and for growth stimulation of a variety of cell lines (van Corven et al.). This product is supplied as the sodium salt of the molecule.

Molecular Name:	1-Oleoyl Lysophosphatidic Acid (Sodium Salt)
Alternative Names:	Oleoyl-sn-3-glycerophosphate
CAS Number:	325465-93-8
Chemical Formula:	$C_{21}H_{40}O_7P \cdot Na$
Molecular Weight:	458.5 g/mol
Purity:	≥ 95%
Chemical Name:	1-O-9Z-Octadecenoyl-sn-glyceryl-3-phosphoric acid sodium salt
Structure:	
Properties

Physical Appearance:	A crystalline solid
Storage:	Product stable at -20°C as supplied. Protect from prolonged exposure to light. Stable as supplied for 12 months from date of receipt.
Solubility:	· PBS (pH 7.2) ≤ 18 mM For example, to prepare a 10 mM stock solution in PBS, resuspend 1 mg in 218 µL of PBS (pH 7.2). Prepare stock solution fresh before use. Information regarding stability of small molecules in solution has rarely been reported, however, as a general guide we recommend storage in PBS at -20°C. Aliquot into working volumes to avoid repeated freeze-thaw cycles. The effect of storage of stock solution on compound performance should be tested for each application. For use as a cell culture supplement, stock solution should be diluted into culture medium immediately before use.

Published Applications

DIFFERENTIATION
· Stimulates neuronal differentiation in cultured mouse or rat neural progenitor cells (Cui & Qiao; Fukushima et al.; Spohr et al.).
· Inhibits human embryonic stem (ES) cell-derived neural stem cells (NSCs) from forming neurospheres and differentiating into neurons in vitro (Dottori et al.).
· Stimulates differentiation of human adipose tissue-derived mesenchymal stem cells to myofibroblast-like cells in vitro (Jeon et al.).
