Product Description

Thiazovivin is a selective inhibitor of Rho-associated coiled-coil containing protein kinase (ROCK), a serine/threonine kinase that plays a role in cell polarity, contraction, and actin cytoskeleton reorganization. Thiazovivin is effective at 5-fold-lower concentrations than another common ROCK inhibitor Y-27632 (Catalog #72302; Xu et al.).

Molecular Name: Thiazovivin
Alternative Names: Tzv
CAS Number: 1226056-71-8
Chemical Formula: C₁₅H₁₃N₅OS
Molecular Weight: 311.4 g/mol
Purity: ≥ 98%
Chemical Name: N-(phenylmethyl)-2-(4-pyrimidinylamino)-4-thiazolecarboxamide
Structure:

Properties

Physical Appearance: A crystalline solid
Storage: Product stable at -20°C as supplied. Protect from prolonged exposure to light. For product expiry date, please contact techsupport@stemcell.com.
Solubility: · Absolute ethanol ≤ 3.2 mM
· DMSO ≤ 40 mM
For example, to prepare a 10 mM stock solution in DMSO, resuspend 1 mg in 321 µL of DMSO.

Prepare stock solution fresh before use. Information regarding stability of small molecules in solution has rarely been reported, however, as a general guide we recommend storage in DMSO at -20°C. Aliquot into working volumes to avoid repeated freeze-thaw cycles. The effect of storage of stock solution on compound performance should be tested for each application.

Compound has low solubility in aqueous media. For use as a cell culture supplement, stock solution should be diluted into culture medium immediately before use. Avoid final DMSO concentration above 0.1% due to potential cell toxicity.

Published Applications

MAINTENANCE AND SELF-RENEWAL

- Promotes survival of human embryonic stem (ES) cells during dissociation by stabilizing E-cadherin and improves cell attachment (Xu et al.).
- Promotes survival of single human induced pluripotent stem (iPS) cells during transfection for TALEN-mediated genome editing (Sun & Zhao).

REPROGRAMMING

- Increases the efficiency of reprogramming human somatic cells to iPS cells, in combination with PD0325091 (Catalog #72182) and SB431542 (Catalog #72232; Lin et al.).
- Increases the efficiency of reprogramming human cord blood mononuclear cells to iPS cells (Hu et al.).
