## Description

Isolate highly purified CD66b+ cells from fresh human whole blood by immunomagnetic positive selection.

- Fast and easy-to-use
- Up to 99% purity
- No columns required

This kit targets CD66b+ cells for positive selection with an antibody recognizing the CD66b surface marker. Desired cells are labeled with antibodies and magnetic particles, and separated without columns using an EasySep™ magnet. Unwanted cells are simply poured off, while desired cells remain in the tube. Isolated cells are immediately available for downstream applications such as flow cytometry, culture or DNA/RNA extraction.

## Component Descriptions

COMPONENT NAME	COMPONENT #	QUANTITY	STORAGE	SHELF LIFE	FORMAT
EasySep™ Human Whole Blood CD66b Positive Selection Cocktail	18682C	3 x 1 mL	Store at 2 - 8°C. Do not freeze.	Stable until expiry date (EXP) on label.	A combination of monoclonal antibodies in PBS.
EasySep™ Whole Blood Magnetic Nanoparticles	18180	3 x 1 mL	Store at 2 - 8°C. Do not freeze.	Stable until expiry date (EXP) on label.	A suspension of magnetic particles in water.
EasySep™ Red Blood Cell Lysis Buffer, 10X Concentrate	20110	1 x 10 mL	Store at 15 - 25°C. Do not freeze.	Stable until expiry date (EXP) on label.	A 10X concentrated red blood cell lysis reagent.

PBS - phosphate-buffered saline

Components may be shipped at room temperature (15 - 25°C) but should be stored as indicated above.

## Additional Reagent Stability Information

REAGENT NAME	STORAGE	SHELF LIFE
EasySep™ Red Blood Cell Lysis Buffer (1X dilution)	Store at 2 - 8°C. Do not freeze.	Stable for up to 3 months. Do not exceed the expiry date (EXP) of the original component.

## Sample Preparation

For available fresh and frozen samples, see [www.stemcell.com/primarycells](http://www.stemcell.com/primarycells).

### PERIPHERAL BLOOD

Collect whole blood in a blood collection tube containing anticoagulant.

## Recommended Medium

EasySep™ Buffer (Catalog #20144), RoboSep™ Buffer (Catalog #20104), or PBS containing 2% fetal bovine serum (FBS) and 1 mM EDTA. Medium should be free of Ca++ and Mg++.

## Directions for Use – Manual EasySep™ Protocols

See page 1 for Sample Preparation and Recommended Medium. Refer to Table 1 for detailed instructions regarding the EasySep™ procedure.

**Table 1. EasySep™ Human Whole Blood CD66b Positive Selection Kit Protocol**

		<b>EASYSEP™ MAGNET</b>	
<b>STEP</b>	<b>INSTRUCTIONS</b>	<b>“The Big Easy” (Catalog #18001)</b>	
1	Prepare sample within the volume range.	Up to 4.5 mL	
	Add sample to required tube.	14 mL (17 x 100 mm) polystyrene round-bottom tube (e.g. Corning Catalog #352057)	
2	Add 1X EasySep™ RBC Lysis Buffer to sample.	Equal volume to sample	
3	Add Selection Cocktail to sample.	25 µL/mL of diluted sample	
	Mix and incubate.	RT for 15 minutes	
4	Mix Magnetic Particles.	Pipette up and down more than 5 times	
5	Add Magnetic Particles to sample.	25 µL/mL of diluted sample	
	Mix and incubate.	RT for 10 minutes	
6	Add recommended medium to top up the sample to the indicated volume. Mix by gently pipetting up and down 2 - 3 times.	<ul style="list-style-type: none"> <li>• Top up to 5 mL for samples &lt; 2.5 mL</li> <li>• Top up to 10 mL for samples ≥ 2.5 mL</li> </ul>	
	Place the tube (without lid) into the magnet and incubate.	RT for 5 minutes	
7	Pick up the magnet, and in one continuous motion invert the magnet and tube,* pouring off the supernatant. Remove the tube from the magnet; this tube contains the isolated cells.	Discard supernatant	
8	Remove the tube from the magnet and add recommended medium to the indicated volume. Mix by gently pipetting up and down 2 - 3 times.	<ul style="list-style-type: none"> <li>• Top up to 5 mL for samples &lt; 2.5 mL</li> <li>• Top up to 10 mL for samples ≥ 2.5 mL</li> </ul>	
	Place the tube (without lid) into the magnet and incubate.	RT for 5 minutes	
9	Repeat steps as indicated.	Steps 7 and 8 (total of 3 x 5-minute separations)	
10	Resuspend cells in desired medium. Be sure to collect cells from the sides of the tube.	Isolated cells are ready for use	

RT - room temperature (15 - 25°C)

\* Leave the magnet and tube inverted for 2 - 3 seconds, then return upright. Do not shake or blot off any drops that may remain hanging from the mouth of the tube.

## Directions for Use – Fully Automated RoboSep™ Protocol

See page 1 for Sample Preparation and Recommended Medium. Refer to Table 2 for detailed instructions regarding the RoboSep™ procedure.

**Table 2. RoboSep™ Human Whole Blood CD66b Positive Selection Kit Protocol**

STEP	INSTRUCTIONS	RoboSep™ (Catalog #20000 and #21000)	
1	Prepare sample within the volume range.	0.25 - 4.5 mL	
	Add sample to required tube.	14 mL (17 x 100 mm) polystyrene round-bottom tube (e.g. Corning Catalog #352057)	
2	Add 1X EasySep™ RBC Lysis Buffer to sample.	Equal volume to sample	
3	Select protocol.	Human CD66b WB Positive Selection 18682-high purity	
4	Mix Magnetic Particles.	Pipette up and down more than 5 times	
5	Load the carousel.	Follow on-screen prompts	
	Start the protocol.	Press the green “Run” button	
6	Unload the carousel when the run is complete. Remove the tube containing the isolated cells and resuspend in desired medium. Be sure to collect cells from the sides of the tube.	Isolated cells are ready for use	

## Notes and Tips

### EASYSEPTM RED BLOOD CELL LYSIS BUFFER

EasySep™ Red Blood Cell Lysis Buffer is supplied as a 10X concentrate. Prepare 1X lysis buffer at least 1 hour before use by adding 1 part 10X lysis buffer to 9 parts distilled or Type 1 water. Mix gently and completely before use.

### ASSESSING PURITY

For purity assessment by flow cytometry use the following fluorochrome-conjugated antibody clone:

- Anti-Human CD66b Antibody, Clone G10F5 (Catalog #60086); (partially blocked)

The following method can also be used:

- Use a fluorochrome-conjugated secondary antibody, such as a FITC-labeled sheep anti-mouse IgG.

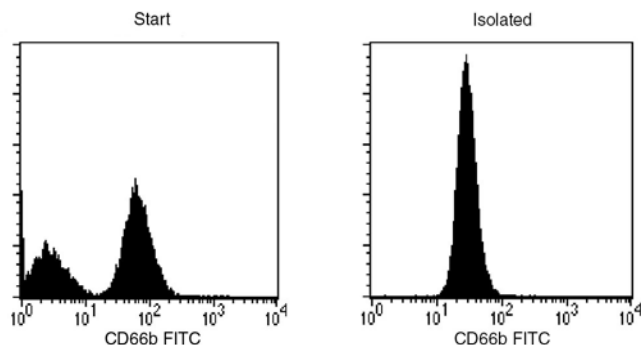

### DONOR VARIABILITY

Certain donors express one or more soluble serum factors that can cause cross-linking with magnetic particles. This may result in visible aggregates in the enriched cell fraction following positive selection. These aggregates may appear as a distinct, high side-scatter population on FSC vs. SSC plots during flow cytometry analysis of the enriched fraction. This population consists solely of particles, with no cells or platelets present, as determined by staining with fluorescently-labeled antibodies against dextran, CD41, and CD45.

Potential aggregation can be avoided by washing away the donor plasma. Dilute the sample 2-fold in the recommended medium, and centrifuge at 300 x g for 10 minutes. Remove as much plasma as possible without disturbing the white and red blood cells, then resuspend the sample to the original volume with recommended medium before beginning the separation procedure.

If the samples have not been washed, any aggregates can be gated out during flow cytometry analysis of the enriched fraction based on their FSC vs. SSC characteristics, or by their lack of CD45 expression.

## Data

Starting with fresh whole blood, the CD66b+ cell content of the isolated fraction typically ranges from 99.3 - 99.9%. In the above example, the purities of the start and final isolated fractions are 53.9% and 99.9%, respectively.
