## Description

Isolate untouched and highly purified naïve CD4+ T cells (CD4+CD44<sup>low</sup>CD62L<sup>high</sup>) from mouse splenocytes by immunomagnetic negative selection. When using single-cell suspensions from other tissue types, this kit may require optimization.

- Fast, easy-to-use and column-free
- Up to 95% purity
- Untouched, viable cells

This kit targets non-naïve CD4+ T cells for removal with biotinylated antibodies recognizing specific cell surface markers. Unwanted cells are labeled with biotinylated antibodies and magnetic particles, and separated without columns using an EasySep™ magnet. Desired cells are simply poured off into a new tube. Isolated cells are immediately available for downstream applications such as flow cytometry, culture or cell-based assays.

## Sample Preparation

### SPLEEN

Disrupt spleen in PBS (Catalog #37350) or Hanks' Balanced Salt Solution (HBSS; Catalog #37250) containing 2% fetal bovine serum (FBS). Remove clumps and debris by passing cell suspension through a 70 µm mesh nylon strainer. Centrifuge at 300 x g for 10 minutes and resuspend at 1 x 10<sup>8</sup> nucleated cells/mL in recommended medium.

Ammonium chloride treatment is not recommended when preparing the cells for separation.

## Recommended Medium

EasySep™ Buffer (Catalog #20144), RoboSep™ Buffer (Catalog #20104), or PBS containing 2% FBS and 1 mM EDTA. HBSS, Modified (without Ca<sup>++</sup> and Mg<sup>++</sup>) can be used in place of PBS. Medium should be free of Ca<sup>++</sup>, Mg<sup>++</sup>, and biotin.

## Directions for Use – Manual EasySep™ Protocols

## Notes and Tips

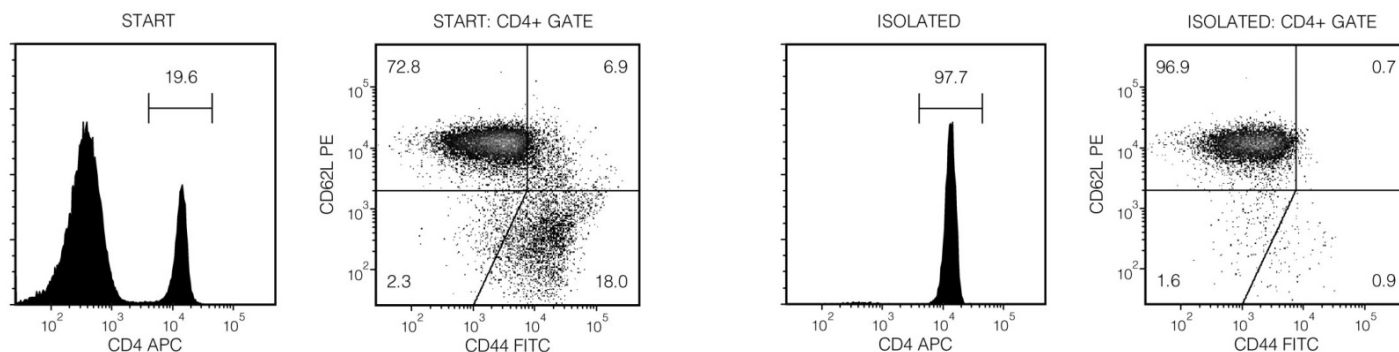

### ASSESSING PURITY

For purity assessment of naïve CD4+ T cells (CD4+CD44<sup>low</sup>CD62L<sup>high</sup>) by flow cytometry use fluorochrome-conjugated:

- Anti-Mouse CD4 Antibody, Clone RM4-5 (Catalog #60017), and
- Anti-mouse CD44 antibody, clone 5035-41.1D, and
- Anti-Mouse CD62L (L-Selectin) Antibody, Clone MEL-14 (Catalog #60109)

The anti-mouse CD44 (Ly-24) clone 5035-41.1D is not blocked by the anti-CD44 clone used in the Mouse Naïve CD4+ T Cell Isolation Cocktail. The 5035-41.1D clone only recognizes the Ly-24.2 isoform which is expressed by C57BL/6, C57BL/10, C57/L, C58A, AKR, 129, SJL, NZB, C3H, CE, CBA/H mouse strains. The anti-mouse/human CD44 clone IM7 is blocked by the anti-mouse CD44 antibody used in the Mouse Naïve CD4+ T Cell Isolation Cocktail and cannot be used to assess purity.

## Data

Starting with mouse splenocytes from an uninfected mouse, the naïve CD4+ T cell (CD4+CD44<sup>low</sup>CD62L<sup>high</sup>) content of the isolated fraction typically ranges from 87.6 - 95.6%. In the example above, the final purities of the start and isolated fractions are 14.3% and 94.7%, respectively.
