Description

Isolate untouched and highly purified naïve CD8+ T cells (CD3+CD8+CD44-CD62L+) from mouse splenocytes by immunomagnetic negative selection. When using single-cell suspensions from other tissue types, this kit may require optimization.

- Fast and easy-to-use
- Up to 98% purity
- No columns required
- Untouched, viable cells

This kit targets non-naïve CD8+ T cells for removal with biotinylated antibodies recognizing specific cell surface markers. Unwanted cells are labeled with biotinylated antibodies and streptavidin-coated magnetic particles, and separated without columns using an EasySep™ magnet. Desired cells are simply poured off into a new tube. Isolated cells are immediately available for downstream applications such as flow cytometry, culture and cell-based experiments.

Sample Preparation

SPLEEN

Disrupt spleen in PBS (Catalog #37350) or Hanks' Balanced Salt Solution (HBSS; Catalog #37250) containing 2% fetal bovine serum (FBS). Remove clumps and debris by passing cell suspension through a 70 µm mesh nylon strainer. Centrifuge at 300 x g for 10 minutes and resuspend at 1 x 10⁸ nucleated cells/mL in recommended medium.

Ammonium chloride treatment is not recommended when preparing the cells for separation.

Recommended Medium

EasySep™ Buffer (Catalog #20144), RoboSep™ Buffer (Catalog #20104), or PBS containing 2% FBS and 1 mM EDTA. HBSS, Modified (without Ca++ and Mg++) can be used in place of PBS. Medium should be free of Ca++, Mg++, and biotin.

Directions for Use – Manual EasySep™ Protocols

See page 1 for Sample Preparation and Recommended Medium. Refer to Tables 1 and 2 for detailed instructions regarding the EasySep™ procedure for each magnet.

Notes and Tips

ASSESSING PURITY

For purity assessment of naïve CD8+ T cells (CD3+CD8+CD44-CD62L+) by flow cytometry use the following fluorochrome-conjugated antibody clones:

- Anti-Mouse CD3e Antibody, Clone 145-2C11 (Catalog #60015), and
- Anti-Mouse CD8a Antibody, Clone 53-6.7 (Catalog #60023), and
- Anti-Mouse CD62L (L-Selectin) Antibody, Clone MEL-14 (Catalog #60109), and
- Anti-mouse CD44 antibody, clone 5035-41.1D

The anti-mouse CD44 (Ly-24) clone 5035-41.1D is not blocked by the anti-CD44 clone used in the Mouse Naïve CD8+ T Cell Isolation Cocktail. The 5035-41.1D clone only recognizes the Ly-24.2 isoform which is expressed by C57BL/6, C57BL/10, C57/L, C58A, AKR, 129, SJL, NZB, C3H, CE, CBA/H mouse strains. The anti-mouse/human CD44 clone IM7 is blocked by the anti-mouse CD44 antibody used in the Mouse Naïve CD8+ T Cell Isolation Cocktail and cannot be used to assess purity.

Data

Starting with splenocytes from an uninfected mouse, the naïve CD8+ T cell content (CD3+CD8+CD44-CD62L+) of the isolated fraction typically ranges from 92 - 98%. In the above example, the purities of the start and final isolated fractions are 11.5% and 96.4%, respectively.
