Product Description

RepSox is a cell permeable, selective inhibitor of the TGF- β type 1 receptor (TGF β RI) ALK5 (IC_{50} = 4, 18, and 23 nM for ALK5 autophosphorylation, TGF- β cellular assay, and ALK5 binding in HepG2 cells, respectively; Gellibert et al.). This inhibitor demonstrated less potent activity (IC_{50} > 16 μ M) against 9 related kinases, including p38 MAPK and GSK3 (Gellibert et al.). This product is supplied as the hydrochloride salt of the molecule.

Molecular Name:	RepSox (Hydrochloride)
Alternative Names:	Alk 5 Inhibitor II; E 616452; SJN 2511
CAS Number:	Not applicable
Chemical Formula:	$C_{17}H_{13}N_5 \cdot HCl$
Molecular Weight:	323.8 g/mol
Purity:	$\geq 98\%$
Chemical Name:	2-(3-(6-methylpyridin-2-yl)-1H-pyrazol-4-yl)-1,5-naphthyridine, monohydrochloride
Structure:	

Properties

Physical Appearance:	A crystalline solid
Storage:	Product stable at -20°C as supplied. Protect from prolonged exposure to light. For product expiry date, please contact techsupport@stemcell.com .
Solubility:	· Absolute ethanol ≤ 1.5 mM · PBS (pH 7.2) ≤ 610 μM For example, to prepare a 1 mM stock solution in absolute ethanol, resuspend 5 mg in 15.4 mL of absolute ethanol.

Prepare stock solution fresh before use. Information regarding stability of small molecules in solution has rarely been reported, however, as a general guide we recommend storage in absolute ethanol at -20°C. Aliquot into working volumes to avoid repeated freeze-thaw cycles. The effect of storage of stock solution on compound performance should be tested for each application.

For use as a cell culture supplement, stock solution should be diluted into culture medium immediately before use. Avoid final ethanol concentration above 0.1% due to potential cell toxicity.

Published Applications

REPROGRAMMING

- Enhances reprogramming of mouse embryonic fibroblasts (MEFs) that have been transduced with OCT4, KLF4, and c-MYC (Ichida et al.; Subramanyam et al.).
- Direct lineage reprogramming of fibroblasts to mature neurons, in combination with CHIR99021, Valproic Acid, Forskolin, SP600125, G66983 and Y-27632 (Hu et al.).

DIFFERENTIATION

- Alone or in combination with forskolin, dexamethasone, and nicotinamide, induces differentiation of human pancreatic progenitor cells into insulin-producing cells (Kunisada et al.; Rezanian et al.).
