Product Description

Tamoxifen is a selective estrogen receptor modulator, with tissue-specific antagonistic or agonistic effects. There are two homologous nuclear receptors for the hormone estrogen (estradiol), commonly called ER α and ER β . Receptor activation leads to the formation of homo- and hetero-dimers, which in turn interact with accessory proteins to regulate gene transcription. Tamoxifen is commonly used to conditionally activate Cre-ER in transgenic models.

Molecular Name:	Tamoxifen
Alternative Names:	Not applicable
CAS Number:	10540-29-1
Chemical Formula:	C ₂₆ H ₂₉ NO
Molecular Weight:	371.5 g/mol
Purity:	≥ 95%
Chemical Name:	2-[4-[(1Z)-1,2-diphenyl-1-buten-1-yl]phenoxy]-N,N-dimethyl-ethanamine
Structure:	

Properties

Physical Appearance:	A crystalline solid
Storage:	Product stable at -20°C as supplied. Protect from prolonged exposure to light. For product expiry date, please contact techsupport@stemcell.com .
Solubility:	· Absolute ethanol ≤ 50 mM · DMSO ≤ 5.3 mM For example, to prepare a 1 mM stock solution in DMSO, resuspend 1 mg in 2.69 mL of fresh DMSO.

Prepare stock solution fresh before use. Information regarding stability of small molecules in solution has rarely been reported, however, as a general guide we recommend storage in DMSO at -20°C. Aliquot into working volumes to avoid repeated freeze-thaw cycles. The effect of storage of stock solution on compound performance should be tested for each application.

Compound has low solubility in aqueous media. For use as a cell culture supplement, stock solution should be diluted into culture medium immediately before use. Avoid final DMSO concentration above 0.1% due to potential cell toxicity.

Published Applications

CELL LINE DEVELOPMENT

- Used in transgenic models to induce Cre-mediated recombination in conjunction with Cre-ER, a fusion protein consisting of Cre recombinase and a mutant form of the estrogen receptor hormone-binding domain that specifically binds tamoxifen but not estrogen (Zhang et al.; Feil et al.).

CANCER RESEARCH

- Inhibits growth in the human breast cancer cell line, MCF-7 (Katzenellenbogen et al.).
- Antagonist of estrogen receptor action in breast tissue and breast cancer cells (Abe et al.; Horwitz et al.).
