## Product Description

Iononycin is a potent and selective calcium ionophore derived from *Streptomyces conglobatus* (Liu et al.). It is used as a research tool to rapidly raise the intracellular level of calcium, and to study calcium transport across biological membranes by inducing the release of cytosolic calcium stores (Morgan & Jacob; Yoshida & Plant). Iononycin is a more effective  $\text{Ca}^{++}$  ionophore than A23187, but less effective at binding and carrying  $\text{Mg}^{++}$  (Liu & Hermann). Iononycin is able to activate and prime the polymorphonuclear neutrophil (PMN) oxidase (Elzi et al.), and is used in conjunction with phorbol 12-myristate 13-acetate (PMA; Catalog #74042) for the activation of T cells ( $\text{IC}_{50} = 5.8 \text{ nM}$ ; Caraher et al.; Zhang et al.).

Molecular Name: Iononycin  
Alternative Names: SQ 23377  
CAS Number: 56092-81-0; 64-17-5  
Chemical Formula:  $\text{C}_{41}\text{H}_{72}\text{O}_9$   
Molecular Weight: 709 g/mol  
Purity:  $\geq 98\%$   
Chemical Name: Iononycin free acid  
Structure:

## Properties

Physical Appearance: A solution in ethanol  
Storage: Product stable at  $-20^{\circ}\text{C}$  as supplied. Protect product from prolonged exposure to light. Stable as supplied for 12 months from date of receipt.  
Solubility: Not applicable.

## Published Applications

### IMMUNOLOGY

· Activates T cells from human, mouse, or rat sources, in combination with PMA, to express cytokines including IL-17, IL-4, IL-10, and IL-2 (Caraher et al.; Harrington et al.; Parrish-Novak et al.).
