Product Description

Dibutyl-AMP is a cell-permeable cyclic AMP (cAMP) analog that activates cAMP-dependent protein kinases (Schwede et al.). This product is supplied as the sodium salt of the molecule.

Molecular Name:	Dibutyl-AMP (Sodium Salt)
Alternative Names:	Bucladesine; DC 2797
CAS Number:	16980-89-5
Chemical Formula:	$C_{18}H_{23}N_5O_8P \cdot Na$
Molecular Weight:	491.4 g/mol
Purity:	≥ 95%
Chemical Name:	N-(1-oxobutyl)-cyclic 3',5'-(hydrogen phosphate) 2'-butanoate-adenosine, monosodium salt
Structure:	

Properties

Physical Appearance:	A crystalline solid
Storage:	Product stable at -20°C as supplied. Protect product from prolonged exposure to light. For long-term storage store with a desiccant. Stable as supplied for 12 months from date of receipt.
Solubility:	· PBS ≤ 6.5 mM · DMSO ≤ 6.5 mM · Absolute ethanol ≤ 2 mM For example, to prepare a 5 mM stock solution in DMSO, resuspend 10 mg in 4.07 mL of DMSO.

Prepare stock solution fresh before use. Information regarding stability of small molecules in solution has rarely been reported, however, as a general guide we recommend storage in DMSO at -20°C. Aliquot into working volumes to avoid repeated freeze-thaw cycles. The effect of storage of stock solution on compound performance should be tested for each application.

For use as a cell culture supplement, stock solution should be diluted into culture medium immediately before use. Avoid final DMSO concentration above 0.1% due to potential cell toxicity.

Published Applications

DIFFERENTIATION

- Suppresses experimental autoimmune encephalomyelitis development by reducing demyelination and mobilizing neural stem cells in the subventricular zone toward the demyelinated plaques (Khezri et al.).
- Induces intrinsic axon growth in peripheral and central nervous systems, and morphological differentiation of astrocytes (Imamura & Ozawa; Knott et al.).
- Stimulates neurite outgrowth in PC12 cells (Maruoka et al.).
