Product Description

SU5402 is a potent and selective inhibitor of vascular endothelial growth factor receptor 2 (VEGFR2), fibroblast growth factor receptor 1 (FGFR1), and platelet-derived growth factor receptor beta (PDGFRB) with IC_{50} = 0.02, 0.03, and 0.51 μ M, respectively (Sun et al.).

Molecular Name:	SU5402
Alternative Names:	Not applicable
CAS Number:	215543-92-3
Chemical Formula:	$C_{17}H_{16}N_2O_3$
Molecular Weight:	296.3 g/mol
Purity:	≥ 98%
Chemical Name:	2-[(1,2-dihydro-2-oxo-3H-indol-3-ylidene)methyl]-4-methyl-1H-pyrrole-3-propanoic acid
Structure:	

Properties

Physical Appearance:	A crystalline solid
Storage:	Product stable at -20°C as supplied. Protect product from prolonged exposure to light. For long-term storage store with a desiccant. Stable as supplied for 12 months from date of receipt.
Solubility:	· DMSO ≤ 6 mM For example, to prepare a 5 mM stock solution in DMSO, resuspend 1 mg in 675 μ L of DMSO.

Prepare stock solution fresh before use. Information regarding stability of small molecules in solution has rarely been reported, however, as a general guide we recommend storage in DMSO at -20°C. Aliquot into working volumes to avoid repeated freeze-thaw cycles. The effect of storage of stock solution on compound performance should be tested for each application.

For use as a cell culture supplement, stock solution should be diluted into culture medium immediately before use. Avoid final DMSO concentration above 0.1% due to potential cell toxicity.

Published Applications

MAINTENANCE AND SELF-RENEWAL

- Supports robust long-term embryonic stem cell propagation when used in combination with leukemia inhibitory factor (Ying et al.).

IMMUNOLOGY

- Inhibits growth and survival of mouse B cells (Trudel et al.).

CANCER RESEARCH

- Induces apoptosis of human multiple myeloma cell lines (Trudel et al.).
