Product Description

Arbidol is a broad-spectrum antiviral compound that blocks membrane fusion between virus and target host cells (Leneva et al.; Teissier et al.). It is effective against numerous viruses, including influenza A, B, and C, and hepatitis B and C, with IC50 values ranging from 3 - 12.5 µg/mL (Boriskin et al.). This product is supplied as the hydrochloride salt of the molecule.

Molecular Name:	Arbidol (Hydrochloride)
Alternative Names:	Not applicable
CAS Number:	131707-23-8
Chemical Formula:	C ₂₂ H ₂₅ BrN ₂ O ₃ S • HCl
Molecular Weight:	513.9 g/mol
Purity:	≥ 98%
Chemical Name:	ethyl 6-bromo-4-[(dimethylamino)methyl]-5-hydroxy-1-methyl-2-(phenylsulfanylmethyl)indole-3-carboxylate;hydrochloride

Structure:

Properties

Physical Appearance:	A crystalline solid
Storage:	Product stable at -20°C as supplied. Protect product from prolonged exposure to light. For long-term storage store with a desiccant. For product expiry date, please contact techsupport@stemcell.com .
Solubility:	· DMSO ≤ 25 mM · Absolute ethanol ≤ 15 mM For example, to prepare a 10 mM stock solution in DMSO, resuspend 1 mg in 195 µL of DMSO.

Prepare stock solution fresh before use. Information regarding stability of small molecules in solution has rarely been reported, however, as a general guide we recommend storage in DMSO at -20°C. Aliquot into working volumes to avoid repeated freeze-thaw cycles. The effect of storage of stock solution on compound performance should be tested for each application.

Compound has low solubility in aqueous media. For use as a cell culture supplement, stock solution should be diluted into culture medium immediately before use. Avoid final DMSO concentration above 0.1% due to potential cell toxicity.

Published Applications

DISEASE MODELING

· Reduces viral replication and acute inflammation through modulating the expression of inflammatory cytokines such as interleukin 1 β , interleukin 6, interleukin 12, and tumor necrosis factor- α (Liu et al.).
