Product Description

Geldanamycin is a benzoquinone ansamycin antibiotic that selectively inhibits heat shock protein 90 (Hsp90) (Schulte et al.; Whitesell et al.). It inhibits the ATPase activity of Hsp90 by binding with high affinity to the N-terminal ATP-binding site ($K_d = 1.2 \mu\text{M}$; Roe et al.). Geldanamycin also binds to the glucose-regulated protein GRP94, an endoplasmic reticulum protein with homology to Hsp90. This interaction destabilizes its complex with p185-ERBB2 leading to degradation of ERBB2 protein, which is overexpressed in aggressive breast cancers (Chavany et al.; Castagnola et al.).

Molecular Name: Geldanamycin
Alternative Names: NSC 122750
CAS Number: 30562-34-6
Chemical Formula: $\text{C}_{29}\text{H}_{40}\text{N}_2\text{O}_9$
Molecular Weight: 560.6 g/mol
Purity: $\geq 98\%$
Chemical Name: (6-hydroxy-5,11,21-trimethoxy-3,7,9,15-tetramethyl-16,20,22-trioxo-17-azabicyclo[16.3.1]docosa-1(21),8,12,14,18-pentaen-10-yl) carbamate

Structure:

Properties

Physical Appearance: A crystalline solid
Storage: Product stable at -20°C as supplied. Protect product from prolonged exposure to light. For long-term storage store with a desiccant. For product expiry date, please contact techsupport@stemcell.com.
Solubility: $\cdot \text{DMSO} \leq 15 \text{ mM}$
For example, to prepare a 1 mM stock solution in DMSO, resuspend 1 mg in 1.8 mL of DMSO.

Prepare stock solution fresh before use. Information regarding stability of small molecules in solution has rarely been reported, however, as a general guide we recommend storage in DMSO at -20°C . Aliquot into working volumes to avoid repeated freeze-thaw cycles. The effect of storage of stock solution on compound performance should be tested for each application.

Compound has low solubility in aqueous media. For use as a cell culture supplement, stock solution should be diluted into culture medium immediately before use. Avoid final DMSO concentration above 0.1% due to potential cell toxicity.

Published Applications

CANCER RESEARCH

- Inhibits growth of 60 human tumor cell lines (Supko et al.).

DISEASE MODELING

- Regulates innate immune response as demonstrated by inhibition of inflammasome activity in a mouse gout model (Mayor et al.).
- Inhibits replication of HSV-1 and HSV-2 (Li et al.).
