Description

Isolate highly purified CD14+ cells from buffy coat samples by immunomagnetic positive selection.

- Fast and easy-to-use
- Up to 99% purity
- No columns required

This kit targets CD14+ cells for positive selection with an antibody recognizing the CD14 surface marker. Desired cells are labeled with antibodies and magnetic particles, and separated without columns using an EasySep™ magnet. Unwanted cells are simply poured off, while desired cells remain in the tube. Isolated cells are immediately available for downstream applications such as flow cytometry, culture, or DNA/RNA extraction.

Sample Preparation

For available fresh and frozen samples, see www.stemcell.com/primarycells.

BUFFY COAT

1. Add an equal volume of recommended medium to whole blood.

NOTE: The sample must be washed before use to remove donor-specific soluble serum factor(s) that can cause cross-linking with magnetic particles.

2. Centrifuge at 200 x g for 10 minutes at room temperature (15 - 25°C) with the brake off.
3. Remove the concentrated leukocyte band (this is the buffy coat), plus a small portion of the plasma and concentrated red blood cells (RBCs). The target is to concentrate the leukocytes approximately 5-fold while maintaining the same hematocrit.
4. Transfer a maximum of 4.5 mL of buffy coat to the required tube (see Table 1).

Recommended Medium

EasySep™ Buffer (Catalog #20144), RoboSep™ Buffer (Catalog #20104), or PBS containing 2% fetal bovine serum (FBS) and 1 mM EDTA. Medium should be free of Ca++ and Mg++.

Directions for Use – Manual EasySep™ Protocols

See page 1 for Sample Preparation and Recommended Medium. Refer to Tables 1 and 2 for detailed instructions regarding the EasySep™ procedure.

		EASYSEP™ MAGNET	
STEP	INSTRUCTIONS	"The Big Easy" (Catalog #18001)	
1	Prepare sample within the volume range.	1 - 4.5 mL	
	Add sample to required tube.	14 mL (17 x 95 mm) polystyrene round-bottom tube (e.g. Catalog #38008)	
2	Add 1X EasySep™ RBC Lysis Buffer to sample.	Equal volume to sample	
3	Add Selection Cocktail to sample.	25 µL/mL of diluted sample	
	Mix and incubate.	RT for 3 minutes	
4	Vortex RapidSpheres™. NOTE: Particles should appear evenly dispersed.	30 seconds	
5	Add Magnetic Particles to sample.	25 µL/mL of diluted sample	
	Mix and incubate.	RT for 3 minutes	
6	Add recommended medium to top up the sample to the indicated volume. Mix by gently pipetting up and down 2 - 3 times.	• Top up to 5 mL for samples ≤ 4 mL • Top up to 10 mL for samples > 4 mL	
	Place the tube (without lid) into the magnet and incubate.	RT for 3 minutes	
7	Pick up the magnet, and in one continuous motion invert the magnet and tube,* pouring off the supernatant. Remove the tube from the magnet; this tube contains the isolated cells.	Discard supernatant	
8	Repeat steps as indicated.	Steps 6 and 7, two more times (total of 3 x 3-minute separations)	
9	Resuspend cells in desired medium. Be sure to collect cells from the sides of the tube.	Isolated cells are ready for use	

RT - room temperature (15 - 25°C)

* Leave the magnet and tube inverted for 2 - 3 seconds, then return upright. Do not shake or blot off any drops that may remain hanging from the mouth of the tube.

Notes and Tips

EASYSEP™ RED BLOOD CELL LYSIS BUFFER

EasySep™ Red Blood Cell Lysis Buffer is supplied as a 10X concentrate. Prepare 1X lysis buffer at least 1 hour before use by adding 1 part 10X lysis buffer to 9 parts distilled or Type 1 water. Mix gently and completely before use.

ASSESSING PURITY

For purity assessment of CD14+ cells by flow cytometry use one of the following fluorochrome-conjugated antibody clones:

- Anti-Human CD14 Antibody, Clone M5E2 (Catalog #60004), or
- Anti-Human CD14 Antibody, Clone MoP9 (Catalog #60124)

One of the following methods can also be used:

- Use an alternative marker such as fluorochrome-conjugated Anti-Human CD36 Antibody, Clone FA6-152 (Catalog #60084).
- Use a fluorochrome-conjugated secondary antibody, such as Goat Anti-Mouse IgG (H+L) Antibody, Polyclonal (Catalog #60138).

Data

Starting with buffy coat, the CD14+ cell content of the isolated fraction is typically 93.0 ± 6.4% (mean ± SD using “The Big Easy” EasySep™ Magnet). In the above example, the purities of the start and final isolated fractions are 8.9% and 98.4%, respectively.
